Subject: Chat with William Walshe
From: William Walshe <billywalshe@gmail.com>
To: barriticus@gmail.com

William: So you don't think the solution to the persona management problem is reverse turing tests, and you don't think crypto is the ultimate solution to privacy. These are just weapons in an ever-expanding arms race that ends with a global artificial intelligence controlling us all through implants. Unless, of course, we find a political solution before it's too late. That's where your wrong, imaginary Brown, because intransigence to privacy is a cultural issue. Susceptibility to propaganda is a cultural issue. These aren't solved in legal battles against immovable objects, but over generations.
me: Dude, human operators of the sort that run persona management used by CENTCOM in Earnest Voice can obviously deal with the captchas
me: As I said, please take the time to learn about the thing that I study intensely before you come to me with "ideas" on it
William: Well, Christ, you don't see them posting ads on 4chan. Anyway, to get to the point, which you _entirely_ missed, the answer to all these problems you've so _intensely_ researched is, ideally, what?
me: busy right now
William: The return of the rule of law in the shining light of Truth and justice?
William: Well, it's good you're documenting all of this for the historical record. Keep up the hard work.
